

An exciting new addition to the award-winning MY Access! instructional writing program, the Enterprise Account Management System (eAMS) provides users unprecedented ease of administration of student information within the MY Access! program. eAMS lets district administrative personnel make changes within their Student Information System (SIS) and have these changes automatically made within MY Access!. Manage student movement with a single enterprise account management system.

More Time Teaching, Less Time Administering

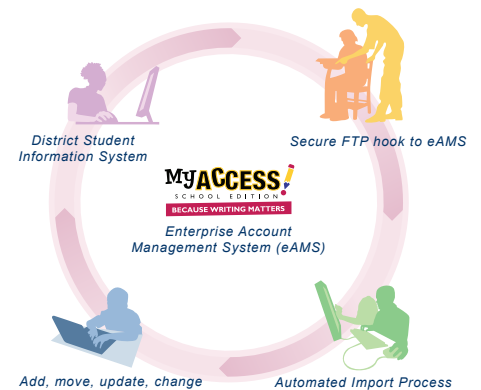

The Challenge

Many school districts are incorporating technology within the district and classroom at a record pace. And why not? Integrating technology to support data-driven instruction and student achievement are important goals we all have. Yet in the face of this opportunity, a continuing challenge incorporating expanded technology in the district and the classroom is the additional burden this places on IT staff, school and district administration, and teachers. With some districts that face 20%, 25%, even 30% student movement within a school calendar year, just keeping up with student movement is daunting. Many districts want to tie information together and make a change once, and have this change deployed across multiple systems. More often than not, these systems are from different vendors.

The Solution

The Enterprise Account Management System (eAMS) has been designed

to help ease the burden of administering the MY Access! system within your district. With seamless integration to other systems, such as your district Student Information System (SIS), changes can be made once and deployed to the MY Access! system as well. This frees IT personnel for other district technology tasks. eAMS makes it easier on teachers too! eAMS saves time and money. School and district technology coordinators or administrators, both at the building and district levels, will have the ability to directly import student rosters at the beginning of the school year or semester, add new students throughout the year, and change the status of students who have moved to another school within the district or who have left the district entirely. The control over this process will be entirely under the direction of the district and school administration. And the best news is that it can now be completely automated via a secure interface between your district

administrative systems and MY Access!. eAMS streamlines the administration of MY Access! so you spend more time teaching students and helping them achieve at their highest potential. Now your instructional staff can focus on teaching and learning in the classroom and leave the data management to occur automatically through a secure file transfer between the district's SIS and the MY Access!® database.

Batch process enables a district SIS Admin to schedule incremental

Enterprise Account Management System (eAMS)

student uploads directly from the district SIS to MY Access via a secure FTP site.

- Upload and activate new users
- Upload users in deactivated status
- Update active or deactivated student data
- Manage student movement within a district
- Support transient population. Data is completely in sync with your district SIS.
- View error logs

The Benefits

MY Access! has become an integral and key component of student success throughout the U.S. Many districts now utilize MY Access! district-wide, across multiple grades and schools. MY Access! improves student achievement, integrates technology in the classroom, provides 1:1 software tutoring and editing, and grades writing instantly and accurately. Teachers spend more time teaching, less time grading papers. Students are motivated to write more frequently. And while the administrative management tools available for districts have been continuously enhanced to make it easier to administer, it remains a challenge to continuously update the system with the various student changes that occur.

The Vantage eAMS lowers the barriers for educators to access and use technology to support classroom education. The eAMS is a fully integrated solution supporting teachers, students and parents

“The MY Access! eAMS has greatly reduced the workload for district level facilitators while eliminating the errors which creep in when teachers or staff set-up student accounts. The eAMS has made the management of thousands of accounts not only easier, but more accurate. New student additions, exited student deactivations, and student movement within the district can happen so easily now. As a teacher, the eAMS system allows me to utilize the MY Access! instructional writing program with very little set-up time.”

- Janice Johnson, Teacher, Granite School District, Utah

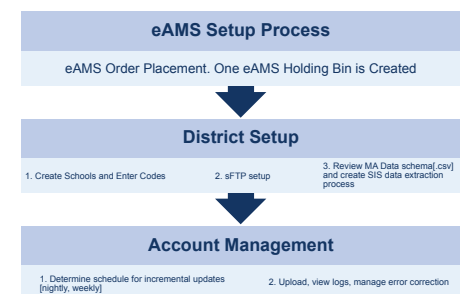

learning, communication and collaboration needs. Intended to integrate Vantage and non-Vantage applications, the Vantage eAMS simplifies system administration by streamlining the tasks associated with managing and maintaining end-user accounts and configuring services for each user or group of users: District Administrators; School Administrators; Teachers; Students; Parents

- Streamline tasks for administering and managing end-user accounts
- Authenticate and authorize users at all levels
- Eliminate redundant workload for IT staff
- User selected options such as a secure browser (Vanguard) to lock down user access to only authorized sites
- Improves school district security
- Realtime information

eAMS: Setting up an Automated Interface with Vantage:

Setting up an automated incremental

interface between the districts SIS and Vantage is easy to do and offers important advantages. The primary advantage is that once it is turned on no human intervention is required to keep the selected information in both the SIS and Vantage identical. Changes made in the SIS are transferred automatically to Vantage and applied to the Vantage database. This section describes how the interface will be set up, tested and monitored.
